

# Test Cases

## Test Case 001: Verify Language Translations in Payment and Delivery Section

Steps to Execute:

- Open the website.
- Change the language to Russian.
- Review the text in the Payment and Delivery section.

Expected Result: All text should be accurately translated to Russian and correspond to the selected language.

## Test Case 002: Verify Interiors Appear in 'Favorites'

Steps to Execute:

- Add any interior to 'Favorites.'
- Navigate to the 'Favorites' tab.
- Open the project containing the recently added interiors.

Expected Result: The interiors should be visible in the project inside the 'Favorites' tab.

## Test Case 003: Validate Input Field Error Messages

Steps to Execute:

- Navigate to the checkout page.
- Enter invalid data in form fields:
  - Input numbers in text fields (e.g., name, surname).
  - Input letters in numeric fields (e.g., flat/house number).
- Submit the form.

Expected Result: Appropriate error messages should be displayed for invalid entries.

## Test Case 004: Verify Large Quantity Handling in Basket

Steps to Execute:

- Add a product to the basket.
- Increase the quantity to an extremely high number.
- Attempt to proceed with the purchase.

Expected Result: The system should either limit the quantity or process the request without errors.

## Test Case 005: Validate Postcode Verification for Shipping Calculation

Steps to Execute:

- Add a product to the basket.
- Enter an invalid/non-existent UK postcode.
- Attempt to calculate shipping costs.

Expected Result: An error message should be displayed, preventing calculation with an invalid postcode.

### **Test Case 006: Verify Correct Final Price Calculation for Different Payment Methods**

Steps to Execute:

- Add a product to the basket.
- Select different payment methods.
- Compare the total price for each method.

Expected Result: The final price should be correctly calculated based on the selected payment method.

### **Test Case 007: Validate Password Requirements During Registration**

Steps to Execute:

- Navigate to the registration page.
- Enter a password that does not meet the stated requirements (e.g., missing a lowercase letter).
- Attempt to complete the registration.

Expected Result: The system should prevent registration until all password requirements are met.
